

QuoteWin and DesignWin Release Notes

Version 10.1.0 to 10.1.14

January 12, 2019 - Version 10.1.14

- Resolved an issue with the Labor setup process import functionality
- Added functionality to the Price Source column in the pricing table to log entries made via API with the API username
- Improved system recording for the Date Sent field in the pricing table, specifically during unique situations when new volume columns are added to a project

December 15, 2018 - Version 10.1.13

- Updated the QW/DW pricing table import to display errors from invalid Combo field entries
- Resolved an internal issue which could cause an error when copying Outsource module projects

December 1, 2018 - Version 10.1.12

- Added new custom fields in GPD Contract and Custom tables
- Added API support for new custom fields in GPD Contract and Custom tables
- Improved SAML support for Single Sign-On users
- Improved database connection management and monitoring

October 27, 2018 - Version 10.1.11

- Improved the Awards Criteria screen to clarify settings and improve user experience
- Added a maintenance option for the purpose of administrating supplier API connections, where applicable
- Resolved an issue in the supplier maintenance function which might present an error when reserved wild card characters are used in supplier names

October 13, 2018 - Version 10.1.10

- Improved the project filter capabilities to better handle special characters in the project name
- Fixed the supplier link in the Pricing Table MPN detail page to display the supplier contact info without an error
- Corrected an error with the File Exchange feature limited to Outsource CM Dashboard

September 29, 2018 - Version 10.1.9

- Added ability for RFQ method to auto-correct when a supplier registers for SupplyWin
- Improvements made to supplier maintenance import and export
- Updates made to internal system log files

September 15, 2018 - Version 10.1.8

- Corrected an issue which prevented the password reset link from resolving correctly under certain conditions
- Resolved an issue in Outsource which prevented the application of a second template
- Refined and consolidated the RFQ Dashboard by removing the redundant RFQ Method column from the display
- Fixed an issue with default filter in GPD which in rare circumstances may have prevented the page from displaying

September 1, 2018 - Version 10.1.7

- Added Parent Assembly and Assembly Flag field options in the Level Costed BOM report
- Improved performance for the CM Selection Import feature within Outsource
- Fixed an issue that prevented the Supplier Type Markup action item from being properly applied in the pricing table
- Corrected an inconsistency with the Initial Date Sent timestamp when copying projects
- Enhanced the BOM tree structure to hide the collapse/expand carrots if assemblies to do not have sub components
- Improved the filter tool in Outsource Part Pricing to support auto population when entering a filter

- Corrected a decimal display issue which was showing more than five digits for CM Target prices in Outsource

August 4, 2018 - Version 10.1.6

- Improved the placement of the 'Remove All' button to be a sub-action button on the Supplier Selection screen
- Corrected an issue which prevented the 'Pricing group' selector from being available in the Analytics project filter screen
- Fixed an issue with the Outsource Best of BOM report to roll up subassembly values correctly
- Resolved an incorrect error message which could display to CM Supplier in Outsource if no bidding parts
- Improved import for CM Selection in Outsource by providing error log showing assemblies that were not found in project
- Improved currency import features in SW to allow null values if no bidding
- Resolved an error message loop that could occur using the Target Price import method under specific conditions
- Improved the session timeout experience to display an inactive countdown 5 minutes prior to expiration
- Updated Pricing Table filter to include filtering for BOM Combo1 and BOM Combo2 fields

- Updated CSV pricing table import to allow % sign when importing percent adders
- Improved confirmation message when Accepting Buffer Prices in the pricing table
- Fixed issue which prevented the Lookup Labor Process feature in Labor from working with specified projects
- Updated the Review stage of the BOM Import process to read user's role permissions in maintenance to determine ability to add new manufacturers during import
- Improved SupplyWin import to not require case sensitivity when import the currency code
- Fixed bug preventing Price Type names in Custom GPD from being edited
- Corrected an issue when manually adding lines to the Custom GPD which could ignore the Mfg Name in under certain conditions
- Updated the BOM export to not use a 0 when downloading the OEM Price and OEM % fields if they are null

- Corrected issue which didn't save announcement detailed text on home page
- Updated Custom GPD import to not require Manufacturer ID according to GPD settings

June 16, 2018 - Version 10.1.4

- Fixed an issue with the project filter screen which was not working with a "Received date" filter
- Corrected a bug which allowed the user to manually delete an incorrect record in Line Card maintenance depending on sort order
- Corrected an issue with editing the effective or expiration date manually in the SiteView module pricing table
- Fixed an issue related to Outsource RFQ Settings templates
- Revised default project due date to be 15 days out
- Revised interface error limiting in pricing table limiting long comment to old character length

June 9, 2018 - Version 10.1.3

- Included [GPDR privacy policy](#) statement in footnotes
- Corrected issue which caused incorrect percentage complete status to appear in running reports
- Updated support for CM Assembly Notes in Outsource to be quoted by CM supplier
- Added a last update date to the Supplier, Manufacturer, and Line Card export tables

May 19, 2018 - Version 10.1.2

- Corrected issue with pricing table csv import which used vol 1 for all prices when manually importing
- Fixed an error with the Project Statistics report which prevented it from being generated correctly
- Corrected an exception issue with the FindChips integration
- Fixed an issue which caused old registration links to stop working
- Resolved an issue with the "Send Message" feature which failed to send messages
- Fixed a bug in the Awards CBOM report which calculated incorrect extended vol quantities

- Resolved an issue which prevented saving updates to a Part Number Listing report template
- Updated the BOM Compare report to run in native 'true' Excel instead of running a post conversion

May 5, 2018 - Version 10.1.1

- Fixed issue in excess inventory report which may have not displayed the details section
- Corrected a bug in the Outsource module which did not include the correct registration link for CM Suppliers
- Corrected an issue which may have used database field names as titles in the SW export instead of the user configured title
- Patched an issue which temporarily prevented the Costed BOM template from being edited
- Improved the efficiency of the "Set CM Target price" feature in Outsource for large projects
- Implemented several fixes for CM import capabilities in SupplyWin for Outsource projects
- Improved the reliability for consolidating multiple VPA projects in SiteView module
- Corrected an issue which may have produced a false error when users import CSV pricing tables
- Updated the Outsource dashboard logic to better factor in required attributes when calculating the completion ratio for a CM Supplier

April 28, 2018 - Version 10.1.0

- Updates environment with Spring framework to provide comprehensive infrastructure support which will better facilitate a high performance enterprise application
- Adds support for Microsoft Edge
- Enhances the CM Dashboard in Outsource to better track the quoted assembly ratio based on the required attributes
- Improves error and status messages associated with uploading part attachments
