

QuoteWin and DesignWin Release Notes

Version 10.2.0 to 10.2.23

July 10, 2020 – Version 10.2.23

- Resolved an issue preventing project combo fields from being set back to a null value after they had been populated
- Fix an issue in Awards Summary section that was not properly rolling up the Reference Pricing Savings

June 20, 2020 - Version 10.2.22

- Improvements made to the Last Cycle Time calculation in the Supplier Performance reports. The Last CT is now a better indicator of the full amount of time from the Initial Send Date, rather than from the Last Send Date
- Fixed an intermittent issue which in rare circumstances could incorrectly calculate the excess quantity with too many decimals
- Added supplier name to the subject line in RFQ emails
- Fixed a compatibility display issue with Microsoft Edge browser and the Outsource Assembly Pricing screen

May 23, 2020 - Version 10.2.21

- Corrected an issue with Outsource Part Pricing import which was not importing data correctly for specific fields
- Added additional background validation for BOM imports which will correctly reset BOM allowing the user to try importing again if an error is encountered
- Enabled activity logs to track changes made to the supplier table (accessible via API only)

May 9, 2020 - Version 10.2.20

- Improvements made to the BOM Import process which will notify users of an existing ongoing import and prevent some actions that could cause slow import performance

- Simplified the SupplyWin registration process to no longer require usernames, only a password will be needed for the email address being registered
- Enhanced the Awards capabilities to allow for scenarios when parts or suppliers may be removed from the pricing table, which will now allow those lines to drop off of Awards when the criteria is re-applied
- Added API support for custom fields in the Awards module

April 25, 2020 - Version 10.2.19

- Corrected a bug which may display dates in the pricing table incorrectly under certain conditions or when in certain time zones
- Improved the error message a user sees when trying to enter a duplicate project name
- Fixed an issue that prevented an Outsource pricing table import when user-configured numeric fields were being loaded

April 11, 2020 - Version 10.2.18

- Updated branding, logos, and support contact email addresses to better represent PolyDyne's parent company Supplyframe and allow QuoteWin, DesignWin, and SupplyWin products to align more clearly with the Supplyframe vision
- Improved price dates in the pricing table to display in users current time zone
- Corrected and improved the BOM rebuild process which could have left deleted parts from the BOM still visible in the pricing table

March 14, 2020 - Version 10.2.17

- Further enhanced the Activity logs in the Pricing Table to better notate different actions taking place (eg using Set Contract Date, Copy Pricing, or applying overrides)
- Resolved an issue with copying the SiteView type of project
- Enhanced API capabilities to be able to identify deleted objects

January 18, 2020 - Version 10.2.16

- Enhanced the visibility of Part Description and Reference Designator fields in the BOM
- Improved the file storage system used by the software to provide better reliability, durability, and efficiency for storing attachments
- Added activity logging of changes in the Line Card table accessible via the API

November 23, 2019 - Version 10.2.15

- Added functionality in Outsource to fully support OEM Price and AML flag status in the Part Pricing Table and CM RFQ Settings
- Increased the file size limits of zip files created when the Download All function is used by suppliers in SupplyWin
- Improved the legibility of some field name labels in the Pricing Table activity logs

November 9, 2019 - Version 10.2.14

- Improved the Download All Attachments function in SupplyWin to increase efficiency and speed especially during large data downloads
- Added unique reference code identifier to some error messages to better allow our team to more accurately diagnose potential problems in the future
- Improved consistency of numeric output in Quantity and Cost fields of the Excess Inventory report
- Resolved intermittent issue which could send a duplicate RFQ email on rare occasions
- Added the ability to add customized fields to the Outsource module at the Assembly level

October 12, 2019 - Version 10.2.13

- Added Part Volume in Awards to distinguish against possible differences compared to MPN Volume
- Updated the Price Query results screen in the pricing table to show correct currency conversions when appropriate

September 14, 2019 - Version 10.2.12

- Improved performance in Awards by speeding up the Criteria application process
- Corrected an issue that prevented Target, Reference and Standard prices from displaying in Awards
- Fixed a discrepancy in Awards which prevented criteria from being applied if the project was locked by the same user
- Fixed an issue in SiteView projects that prevented the Internal MPN from being included in SupplyWin pricing exports

August 24, 2019 - Version 10.2.11

- Fixed an issue that could prevent certain users from successfully using the Upload to GPD button in Awards

August 10, 2019 - Version 10.2.10

- Fixed an Awards Filter issue which caused the filter to reset after applying criteria, or for the lock buttons to not work while a filter was applied

July 27, 2019 - Version 10.2.9

- Added Part Volume to the Awards pricing table view
- Included user definable pricing fields and configurable fields to the Awards All Columns export
- Added visibility for Part Description in the Awards table
- Improved the legibility of locked items in the Awards table by removing the unlock icon and only showing the lock icon when appropriate
- Added API capability to run Awards criteria via programmer interface

July 13, 2019 - Version 10.2.8

- Corrected a potential issue with the Copy Project feature which may occur if child components have been deleted in the original source project
- Simplified the Cost Rollup process by discarding the obsolete proposal wizard function

June 22, 2019 - Version 10.2.7

- Adds the ability to set unique supplier due dates for different suppliers in the same project

May 25, 2019 - Version 10.2.6

- Include ability to add new custom Project fields. Upon request, users will be able to add text, combo, checkbox, date and numeric type fields to Projects.

May 11, 2019 - Version 10.2.5

- Improve performance in Multiple Project Consolidation function for Commodity Management projects
- Resolved issue with BOM Map export function

April 27, 2019 - Version 10.2.4

- Adds ability for suppliers to quote alternate parts in 'by CPN' project types
- Fixed an issue which prevented copied projects from being locked
- Corrected the accuracy of error messages in SupplyWin import when incorrect currency or packaging codes were used
- Improved the usability of the Add Alternate MPN feature in SupplyWin by automatically refreshing the screen when new MPNs are added

April 13, 2019 - Version 10.2.3

- Enhanced Activity Logs in the pricing table; activity logs now record all types of changes with improved accuracy
- Improved reliability of the Copy Project function to mitigate any potential discrepancies
- Corrected an inaccuracy on the CM Dashboard screen for copied Outsource projects

March 9, 2019 - Version 10.2.2

- Enabled new auto-registration feature to automatically link existing SupplyWin accounts when a new region or supplier name is used; this will prevent suppliers from having to register more than once
- Enhanced the Pricing Table Rebuild process to automatically include added manufacturers to the Supplier Selection screen if the manufacturer was already selected
- Fixed a discrepancy in Awards Criteria which was not correctly factoring in legacy Price Overrides from the pricing table
- Simplified the confirmation message when locking a project
- Corrected a potential display issue in SupplyWin if custom fields were used in RFQ Settings
- Resolved an issue with the RFQ Setting feature for showing Lookup Prices to suppliers which was interfering with the accuracy of the date received

February 9, 2019 - Version 10.2.1

- Enhanced background activities responsible for rebuilding the pricing table, and keeping the pricing table accurate when changes are made to the BOM
- Corrected a discrepancy with the Date Received field in the pricing table which could be inaccurate under certain conditions

January 26, 2019 - Version 10.2.0

- New Inventory feature added to Awards module's *Criteria* for analyzing and selecting prices where supplier's on-hand inventory covers the required volume
- Includes additional export capabilities in the Maintenance sections for *BOM Map*, *Customer*, and *Supplier User*
- Corrections made to BOM Import step 2 for improving saved Mapping Templates when importing a BOM
- Improved the *Copy STD Cost* feature in the pricing table to remove no-bid flags when user opts to use the Standard Cost as the price
- Increased the size of the *Branch* project combo field to 25 characters
